

Assignment -2

1.What does the command pwd, whoami, and hostname display? (CO1)

Pwd → prints the current working directory path.

Whoami → shows the current logged-in username.

Hostname → displays the system's host name (computer name on the network).

2.Command to create a directory named “project” inside /home/student and keep three .txt files into it. (CO1)

Mkdir /home/student/project

Cd /home/student/project

Touch file1.txt file2.txt file3.txt

Snapshot (example output using ls):

\$ ls /home/student/project

File1.txt file2.txt file3.txt

3.Difference between Absolute Path and Relative Path (CO2)

Absolute Path → Starts from the root directory / and gives the full location.

Example:

/home/student/project/file1.txt

(No matter where you are, this path works.)

Relative Path → Starts from the current working directory.

Example:

./project/file1.txt

4.Command to view already executed command traces (history). (CO1)

History

*Shows the list of commands previously executed.

Example Output:

```
1  pwd
2  whoami
3  hostname
4  mkdir /home/student/project
5  cd /home/student/project
```

5.Compare find and locate command. Which one is faster and why? (CO1)

Find → Searches files in real-time by traversing the directory tree.

Example: find /home -name file1.txt

Locate → Uses a prebuilt database (mlocate.db) for searching files.

Example: locate file1.txt

6.Command to modify file permissions in Linux (CO1)

Command: chmod

Example:

Chmod 755 file1.txt

7.A file has permissions -rw-r—r--. What does this mean? (CO1)

- → regular file

Rw- → Owner can read & write

r-- → Group can read only

r-- → Others can read only

8.Difference between chown and chgrp (CO1)

Chown → changes ownership of a file (user).

Chgrp → changes group ownership of a file.

Example:

Chown student file1.txt # change owner to student

Chgrp staff file1.txt # change group to staff

9.will you set permissions? (CO1)

Use:

Chmod 644 filename

Explanation:

Owner: read + write (rw-)

Group: read-only (r--)

Others: read-only (r--)

So, everyone can read, but only the owner can write.

10.How do you check the manual page for any Linux commands? (CO1)

Command:

Man <command>

Example:

Man ls
