

LINUX ASSIGNMENT 3

1. Distinguish between man and whatis commands (CO1)

man: Displays the full manual page for a command.

whatis: Displays a one-line short description of a command.

Example:

man ls → Opens full documentation.

whatis ls → Shows "ls (1) - list directory contents".

2. Use the tee command to save the output of ls -l into a file while also displaying it (CO4)

ls -l | tee output.txt

3. Example of using tee command in logging (CO4)

./backup_script.sh | tee -a backup.log

4. Steps to install Ubuntu 25.04 LTS on Oracle VirtualBox (CO2)

1. Download Ubuntu 25.04 LTS ISO.
2. Create new VM in VirtualBox.
3. Allocate RAM (4GB+), CPU cores, and disk space (20GB+).
4. Attach ISO in Storage settings.
5. Boot VM and install Ubuntu.
6. Configure username/password and finish installation.

5. Troubleshooting Kernel Panic Error during Ubuntu installation (CO3)

- Verify ISO checksum.
- Allocate more RAM and CPU cores.
- Enable VT-x/AMD-V in BIOS.
- Use Safe Graphics mode if GPU issue.
- Update VirtualBox Guest Additions.

6. Command to display system's hostname and change it using sysctl (CO1)

Display: hostname

Change: sudo sysctl kernel.hostname=newhostname

7. Command to show calendar of August 1984 (CO1)

cal 8 1984

8. Command to display system uptime and logged-in users together (CO3)

w

OR

uptime && who

9. Use find to list all ".c" files in /home/user (CO1)

find /home/user -name "*.c"

10. Change file permissions to allow only the owner to read and write (CO1)

chmod 600 filename
